What is Multi-layer Collaborative Security?

In line with our vision of multi-layer collaborative security, we develop solutions that collaborate with one another in real time.

Our solutions allow organizations seeking to improve the protection of their assets to dynamically raise the level of security where it is needed.

Stormshield solutions automatically strengthen security levels based on the real-time correlational analysis of indicators of compromise at the lowest cost.

Optimum protection from attacks

Breach Fighter combines the high-level antivirus protection that the Antivirus engine provides with the protection of the patented IPS engine and Stormshield Endpoint Security's technology. Specially designed to counter the most sophisticated threats, this technology has already proven its worth against targeted attacks and ransomware.

Multi-layer protection

- Stormshield's Multi-layer Collaborative Security approach
- An infected file is detected, the Stormshield community will be automatically protected

Trusted cloud service

- Deployed in trusted European datacenters
- Compliant with European regulations governing the protection of private data (GDPR)

Effortless integration

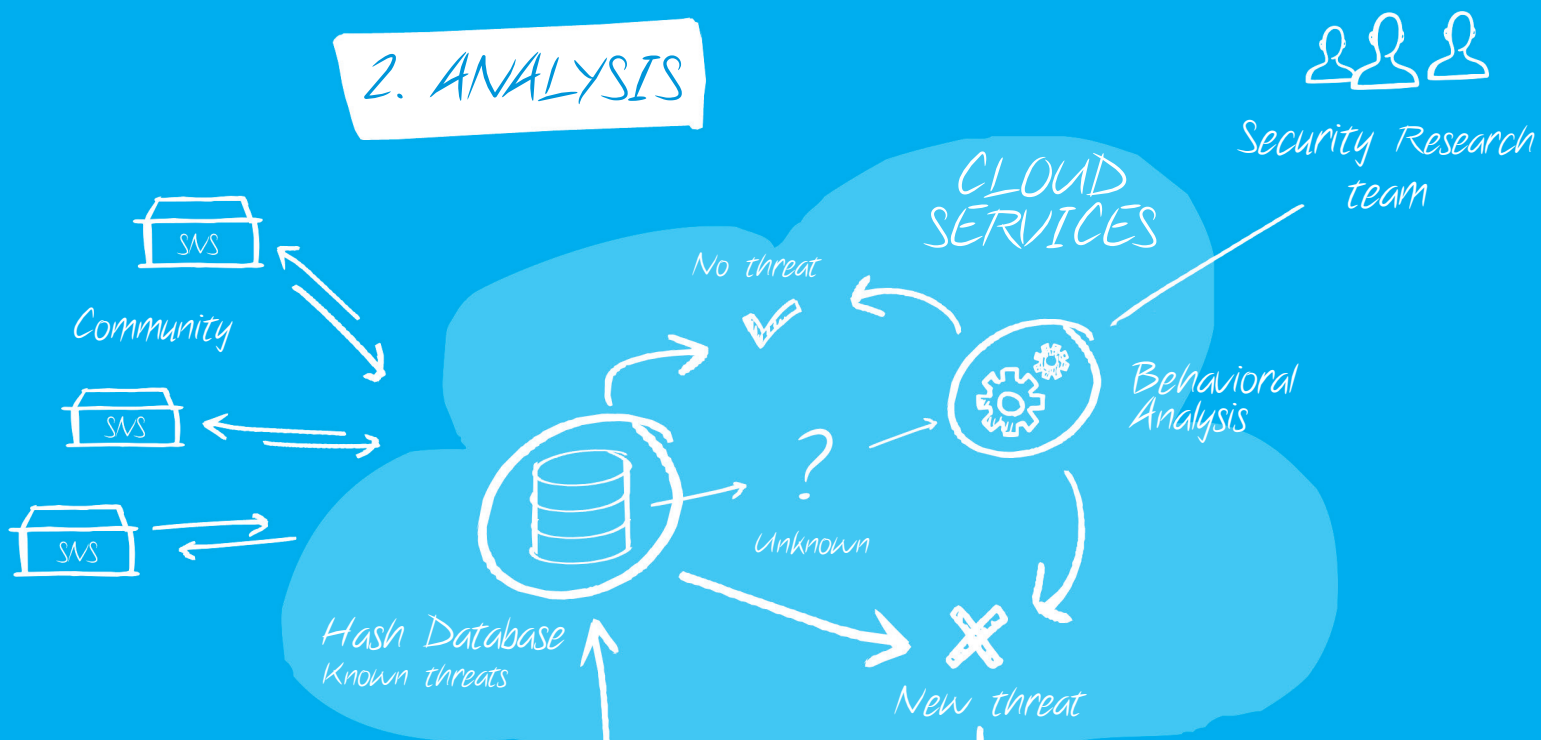

- Enabled in a single click on a Stormshield appliance
- Leaves no impact on the infrastructure as a new inspection
